

Self-regulating surface snow-melting and anti-icing heating cable

PRODUCT OVERVIEW

Heating cable construction

nVent RAYCHEM ElectroMelt heating cable provides surface snow melting and anti-icing in concrete pavement.

Self-regulating

The polymer core of an ElectroMelt heating cable automatically adjusts power output at every point along its length in response to concrete pavement temperature. This response characteristic eliminates burnouts caused by overlapping cable and provides improved energy efficiency without the need for special controls.

Parallel circuitry

The crosslinked, conductive polymer core of the ElectroMelt heating cable is extruded between two 14 AWG copper bus wires, forming a parallel circuit. This allows ElectroMelt heating cables to be cut to length and to be spliced and repaired, if necessary, in the field.

RUGGED

Specifically designed for direct burial in concrete, ElectroMelt heating cables are protected by a tinned-copper braid encased in a 70-mil modified polyolefin outer jacket. With no exposed metal parts to corrode and no burnout due to overlaps or hot spots, rugged ElectroMelt heating cable offers an ideal solution for all types of concrete pavement snow melting and anti-icing.

CONNECTION KITS

nVent RAYCHEM ElectroMelt connection kits must be used to terminate ElectroMelt heating cables. Refer to the Surface Snow Melting and Anti-Icing Design Guide – ElectroMelt (H53393) for proper connection kit selection.

APPROVALS

Listed for use with
EM2-XR de-icing and
snow melting system

The EM2-XR heating cable is UL Listed and CSA Certified only when used with the appropriate agency-approved nVent RAYCHEM connection kits and accessories.

GROUND-FAULT PROTECTION

To minimize the danger of fire from sustained electrical arcing if the heating cable is damaged or improperly installed, and to comply with the requirements of nVent RAYCHEM, agency certifications, and national electrical codes, ground-fault equipment protection must be used on each heating cable branch circuit. Arcing may not be stopped by conventional circuit protection. Many nVent RAYCHEM control and monitoring systems meet the ground-fault protection requirement.
