

PRODUCT DATASHEET

Type: ET-9200F
Art. Nr.: 40674

Short description

Controls for outdoor heating, excl. sensor

Product Description

The ET-9200F ice and snow detector is ideally suited for use with outdoor heating systems and, as an entry-level model, is especially designed for controlling small systems with one temperature and humidity sensor and one heating circuit. An uncomplicated installation is possible thanks to only two rotary dials for the activation temperature and the humidity threshold. Further function parameters such as lower switch-off temperatures and minimum and post-heating times can be set via a parameterization mode if required. Two three-colour LEDs show the operation indicator. Suitable for one probe (ET-3356). Measuring range -30 °C to °C, IP 20, load max. 16 A, 230 V.

ETIM characteristics

Model	Analogue	Rated voltage	230 230 Volt
Sensor type	Remote sensor	Rated frequency	50 50 Hertz
Text guidance in display	✗	Number of channels	1
24 h program	✗	Shortest temperature phase	0 Minute
Weekly program	✗	Number of memory locations	0
Holiday program	✗	Number of basic programs standard	1
Input for time program	✗	Autonomy	0 Hour
Automatic switching summer-/winter time	✗	Nominal switching current at 250 V, potential free	16 Ampere
Operation mode switch	✗	Nominal switching current at 230 V, not potential free	16 Ampere
Switching preselection	✗	Width in number of modular spacings	3
Contact type	Breaker contact	Assembly depth	61 Millimetre
Degree of protection (IP)	IP20	Standby power consumption (solstandby)	3 Watt
Class of the temperature control	II
